DarkBox Programmer V3

Product Model

DB33 - Gantom DarkBox Programmer V3

Features

- Full-color display with intuitive menus
- Test the output of a light fixture
- Set the DMX address of a light fixture
- Save a standalone color/brightness setting into the memory of the light fixture.
- Toggle on/off fixture bootup flashing
- 12V DC barrel-jack power input (powers programmer and fixture while connected)
- RJ45 output port for direct fixture connection
- Includes 12V DC power adapter

Description

The DarkBox Programmer V3 is a compact, user-friendly tool for configuring Gantom light fixtures. It provides the same straightforward programming functions as previous models, with an updated 12 V DC barrel-jack power input that supplies power to both the programmer and the connected fixture during programming.

A female RJ45 port allows direct connection to Gantom's RJ45-based fixtures for fast and reliable setup.

Power & I/O

Power Input (to programmer)
 Fixture Output

12V DC barrel jack (5.5 mm OD × 2.1 mm ID, center-positive)

Combined data and 12V DC power via female RJ45 connector
